Note: Please use only the free tier resources of AWS and immediately shut down the resources once done otherwise you will incur the cost and take the screenshots of your results

Q. Create an S3 bucket and show versioning - adding same file again, deleting the file and deleting the same file again.

Q. Create a MySQL RDS free tier instance and connect to it.

Q. Create a glue crawler and an etl job and process some data using spark code.
[Immediately delete your ETL job as it can cost money]

Q. Copy data from S3 to Redshift using COPY command
